**Title:** MEDICINAL AGENT AND METHOD FOR CURING PATHOLOGICAL SYNDROME ASSOCIATED TO HEMODISCRASIA

**Abstract:** The inventive medicinal agent is based on antibodies and contains an activated form of ultra-small doses of anti-erythropoietin monoclonal, polyclonal and natural antibodies. Said form is produced by repetitive successive dilution and an external action being used mainly by means of homeopathic technology. In order to produce said antibodies, a human or heterologous alpha, beta or omega erythropoietin including recombinant or genetic engineering erythropoietin is used, thereby a mixture of different, mainly centimal, homeopathic dilutions being used. The inventive method for curing pathological syndrome associated to hemodiscrasia, mainly erythropoiesis, consist in using ultra-small doses of the activated forms of antibodies to alpha, beta or omega erythropoietin which are produced by repetitive successive dilution and an external action.
